## EMS Safety – Current Issues or The Ride of Your Life: What You Can't Afford Not To Know About Ambulance Safety

Nadine Lewicki, MEd, MEd, MEd  
Research Director, EMS Safety Foundation  
CEO, Objective Safety  
Faculty, Brookdale University Hospital, SUNY  
New York, USA

www.EMSSafetyFoundation.org

## Emergency Medical Service Transport

- What are the transport safety issues that pertain to this important public service and public safety industry?
- What do we know of the risks and hazards and how can we measure these ?
- How can the safety of this transport system be optimized?

www.EMSSafetyFoundation.org

## Emergency Medical Services (EMS) An important and unique transport system

- Public safety, public health and emergency service
- Is there to save lives

www.EMSSafetyFoundation.org

<http://www.objectivesafety.net>  
Your Handout and Additional Resources

www.EMSSafetyFoundation.org

## Very Important Principle

Ambulance transport safety is part of a **SYSTEM**, the overall balance of risk involves the safety of all occupants and the public

www.EMSSafetyFoundation.org

## Patient Safety- A routine healthcare concept...

www.EMSSafetyFoundation.org

## But Patient Safety is just one part of this system

www.EMSSafetyFoundation.org

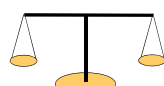

## EMS Transport Safety

- 'patient safety'
- **AND** also
- 'provider' and 'public safety'

www.EMSSafetyFoundation.org

## Balance of concerns and risk during transport

- Response and transport time
- Clinical care provision
- Occupant safety/protection
- Public Safety

www.EMSSafetyFoundation.org

## Some odd facts

- Ambulances are generally not built by the automotive industry
- Intelligent Transportation Systems (ITS), transportation safety engineering is not generally integrated into EMS systems
- Although all EMS systems have medical direction and oversight, it is rare for there to be transportation expertise oversight

EMSSafety  
FOUNDATION

Member: © 2010-2011 Knowledge Transfer  
www.EMSSafetyFoundation.org

## Is there an acceptable rate of morbidity and mortality for pre-hospital transport systems??

EMSSafety  
FOUNDATION

Member: © 2010-2011 Knowledge Transfer  
www.EMSSafetyFoundation.org

## Ambulance transport a serious transport safety problem...

In the USA

- the most lethal vehicle on the road both per mile travelled and per vehicle
- is exempt from commercial fleet safety oversight from Federal Motor Carrier Safety Administration (FMCSA)
- 2/3 fatalities not in the ambulance
- Exempt from most FMVSS standards

EMSSafety  
FOUNDATION

Member: © 2010-2011 Knowledge Transfer  
www.EMSSafetyFoundation.org

## Data...

- What is your transport safety record in your service?
- How can you improve if you don't have a meaningful measure of safety performance?
- Transport safety is not guesswork, it is a science

EMSSafety  
FOUNDATION

Member: © 2010-2011 Knowledge Transfer  
www.EMSSafetyFoundation.org

## ...and

- Is your ambulance crashworthy?
- Do you have a telematics monitoring and feedback system?
- Enhanced Stability Control (ESC) – Does your ambulance have it??
  - An estimated >16% decrease in vehicle crashes
- and what is your loading height??
  - ...is it less than 27 inches (68cm)??

Pd. ambulance involved in crash; patient pronounced dead at scene

By David W. Thomas  
The York Daily Record  
Copyright © 2010 York Newspapers, Inc.  
All rights reserved.

An Adams County ambulance, carrying a patient to York Hospital, rolled off a road at a dangerous rate of speed, 20 and 30 in. That was a major factor in a Feb. 10 crash, in which the patient was pronounced dead at the scene.

York County Deputy Coroner Claude Stahley said the patient, a woman, was being transported from Gettysburg Hospital, because she was suffering a "significant" heart condition.

He said he's still trying to determine whether it was in fact cardiac arrest and died prior to the crash, or whether she suffered a fatal heart attack because of or after the crash. Stahley said she suffered no significant traumatic injuries, but was

## April 2010, Resuscitation – Going fast can hurt your patient clinically!

The screenshot shows a medical article with the following details:
 

- Journal:** Resuscitation
- Title:** Effect of vehicle speed on the quality of closed-chest compression during ambulance transport
- Authors:** Lee Hwang Chung<sup>a</sup>, Sun Young Kim<sup>a</sup>, Young Hoon Cho<sup>a</sup>, Sang Mi Chung<sup>a</sup>, Michael Park<sup>a</sup>, Young Ho Kim<sup>a</sup>
- Abstract:** Background: The quality of closed-chest compression during ambulance transport is affected by vehicle speed. Objective: To determine the effect of vehicle speed on the quality of closed-chest compression during ambulance transport. Methods: A total of 100 ambulance runs were monitored. The quality of closed-chest compression was assessed using a motion analysis system. Results: The quality of closed-chest compression was significantly lower at higher vehicle speeds. Conclusion: Vehicle speed significantly affects the quality of closed-chest compression during ambulance transport. Therefore, ambulance drivers should be aware of the effect of vehicle speed on the quality of closed-chest compression during ambulance transport.

## Golden Hour Summary

- This study suggests that in our current out-of-hospital and emergency care system time may be less crucial than once thought. Routine lights-and-sirens transport for trauma patients, with its inherent risks, may not be warranted. [Ann Emerg Med. 2010;55:247-248.]

### EMS Transport General Concerns

- Consequences can be predictable & likely preventable
- Costs of these adverse events are high in loss of life, financial burden and negative impact on delivery of EMS care
- Other high speed vehicles (eg. racing cars) have a different safety paradigm
- Design of interventions to mitigate injury is predicated on a valid testing model
- Complex both engineering and public health issues

EMSSafety FOUNDATION

Foundations of Evidence-Based Knowledge Transfer  
www.EMSSafetyFoundation.org

### June 17<sup>th</sup> 2008 a paramedic and a patient killed

EMS CRASH KILLS PATIENT AND A SUSSEX COUNTY (DE) PARAMEDIC IN THE LINE OF DUTY Tuesday, June 17, 2008

We regret to advise you that a female Sussex County (DE) Paramedic was killed in the Line of Duty as was a patient killed in a horrific crash involving an ambulance in Sussex County (DE) this morning.

The single vehicle crash happened around 02:10 Hours on the John J. Williams Highway near the Lewes-Rehoboth joint fire company station in Angola.

The Mid-Sussex Rescue Squad ambulance was transporting to Beebe Medical Center with a patient, 2 MSES Squad members and the Sussex County Paramedic were on board when it struck a tree, which opened the side of the ambulance as seen on our home page. Tragically, the patient was killed as was the Sussex County EMS Paramedic, who was killed in the Line of Duty.

Sussex County EMS also suffered a close call last year when a Paramedic John Schmitt was seriously injured in a crash when a civilian struck the Millard Fire Company ambulance he was riding in, while returning from a run. Additional details on this morning's crash will follow.

## Ambulance accidents down

Postcard from 10/10/2010

System put in place | Ambulance NB says safety program works

By: In-Action  
[www.actionmagazine.com](http://www.actionmagazine.com)

Ambulance NB has had recent accidents leading to paramedics were substantially, but a system-wide vehicle safety program has drastically reduced collisions over the past two years.

Statistics provided by The Daily Observer show that the provincial ambulance service was involved in a total of 86 collisions and injuries in 2008.

That number declined to 68 accidents in 2009.

Daphne Cormier-Lambert, national communications officer for Ambulance NB, said the company introduced a comprehensive vehicle safety program in April 2008 and noticed results immediately.

“The total reduction in collisions from 2008 to 2009 is 23 per cent,” she said.

“While we had a reduction in major collisions of 50 per cent – that means vehicles that are out of service as a result of a collision.”

The program consists of two sections – Requiring components that cover both vehicle and practical skills.

Incentive | Education | Knowledge Transfer  
 www.EMSSafetyFoundation.org

### Testing the real world

### And this all takes place in 60 milliseconds – the blink of an eye

### What do we know now??

- Intersection crashes are the most lethal
- There are documented hazards, some which can be avoided
- Occupant restraint with standard belts is effective. (Over the shoulder belts for stretcher patients, with the gurney in the upright position where medically feasible)
- All equipment should be locked down
- Some vehicle design features are beneficial – ESC, forward and rear facing seating
- Head protection??
- Electronic Driver monitoring/feedback systems appear to be highly effective

### Air EMS is a role model for safety initiatives and focus

### Air Safety Approach

- Safety Program Planning
- Evaluating
- Analysis of Safety Performance
- Analysis of Safety Information and Data
- Analysis of Risk Profiles and Plans

**A few key words about restraint systems...**

EMSSafety FOUNDATION www.EMSSafetyFoundation.org

### Emergency Vehicles – Viewer Awareness

For a timely, appropriate and safe response

- Location
- Size
- Shape
- Speed
- Intended path

EMSSafety FOUNDATION Member of International Emergency Training www.EMSSafetyFoundation.org

- Having access to that technical knowledge supports changes to improve safety practice

EMSSafety FOUNDATION Member of International Emergency Training www.EMSSafetyFoundation.org

### Innovation

EMSSafety FOUNDATION Member of International Emergency Training www.EMSSafetyFoundation.org

### What's new

- New automotive safety technologies
  - crashworthiness
  - ESC
  - ITS
  - Monitoring and feedback enhancements
- New expertise
  - TRB
  - SAE
  - UTRC
  - Ergonomics
  - Industrial Design

EMSSafety FOUNDATION Member of International Emergency Training www.EMSSafetyFoundation.org

### Safety concepts out there now

- Driver feedback telematics technologies
- Tiered dispatch
- Enhanced ambulance vehicle design
- Intelligent Transport Technologies – ITS
- New Safety Standards

EMSSafety FOUNDATION Member of International Emergency Training www.EMSSafetyFoundation.org

### In-vehicle telematics - A transportation safety monitoring and feedback device

This technology is conceptually like a vehicle safety 'pulse oximeter' – that with auditory feedback - can save your life, your coworkers life, your patients life, and others on the road

### Demonstrated Effectiveness

### MEMS - Seatbelt Violations per Month

### Extensive Indirect cost savings

- Fewer out of service vehicles
- Improved transport times
- Decreased administrative lost in managing unsafe behaviors
- Decreased legal burden
- Automatic system wide data
- Insurance benefits

### Other monitoring devices

- Primarily to record events during and immediately preceding a crash
- Give no driver crash prevention feedback
- Administratively burdensome
- Intrusive
- Not demonstrated to be as effective in improving vehicle maintenance costs or as effective in modifying driver behavior long term

### Resource availability and allocation technologies to enhance system performance

### The jury is out on

- Opticon
- Simulators

### International approaches

- The state of the art non-USA vehicles have NO squad bench nor the after market structural vehicle modifications that can potentially decrease crashworthiness integrity that were seen in study vehicles.

### Collaboration and Outcomes

- Interdisciplinary Collaboration is what is key – not orthopedic folks talking to cardiologists – BUT collaboration between the health care folks appropriate automotive and occupant protection engineers and transportation system design, ergonomists and industry standards that make sense – and
- Meaningful measures of outcome and performance

### Technical Collaboration is key

- We are NOT the experts in this science
- We cannot afford to play the silo game here, it is costing lives, time and money
- We MUST have a meaningful evidenced based approach to design, operations and policy
- We must be outcomes driven

EMSSafety FOUNDATION

### this vehicle is safety crash tested by automotive experts

EMSSafety FOUNDATION

Illustration © Illustration & Knowledge Transfer  
www.EMSSafetyFoundation.org

### Unlike this vehicle

EMSSafety FOUNDATION

Illustration © Illustration & Knowledge Transfer  
www.EMSSafetyFoundation.org

### So....

- Which vehicle do you want to be in ?
- Which vehicle is the best for efficient, and effective patient care?
- Which vehicle provides optimal risk management ?
- What is the optimal fleet mix?

EMSSafety FOUNDATION

Illustration © Illustration & Knowledge Transfer  
www.EMSSafetyFoundation.org

### Fleet Mix ?

EMSSafety FOUNDATION

Illustration © Illustration & Knowledge Transfer  
www.EMSSafetyFoundation.org

### Risk/Hazards

- Predictable risks
- Predictable fatal injuries
- Serious occupational hazard
- Public safety hazards

EMSSafety FOUNDATION

Illustration © Illustration & Knowledge Transfer  
www.EMSSafetyFoundation.org

### So what do we need to do ??

- Reach out to the appropriate experts – they sure do want to help us
- STOP being philistines and be the scientists we are trained to be and at least seek a scientific approach
- Get your heads out of the sand – there is plenty of valid technical information – FMCSA, TRB, SAE
- Make policy and purchase decisions on technically sound data, not a marketing brochure
- HAVE MEANINGFUL AND TRANSLATABLE OUTCOME MEASURES FOR YOUR SERVICES SAFETY PERFORMANCE

EMSSafety

### What is the EMS Transport Safety Research Agenda?

- Shouldn't it be driven by data, and appropriate technical expertise

EMSSafety  
FOUNDATION

© 2010 EMSSafety Foundation  
www.EMSSafetyFoundation.org

### Very Important Principle

Ambulance transport safety is part of a SYSTEM, the overall balance of risk involves the safety of all occupants and the public

EMSSafety  
FOUNDATION

© 2010 EMSSafety Foundation  
www.EMSSafetyFoundation.org

### What do we know works...

- Vehicle Operations Safety Policies
- Squad bench lap seat belts
- Patient over the shoulder belts
- Securing equipment
- Forward and rear facing seating
- Some electronic technical devices
- Safety awareness
- Cultural change

EMSSafety  
FOUNDATION

© 2010 EMSSafety Foundation  
www.EMSSafetyFoundation.org

### Future

- Meaningful Goals
- New policies
- New practices
- New standards
- New vehicles
- New technologies

EMSSafety  
FOUNDATION

© 2010 EMSSafety Foundation  
www.EMSSafetyFoundation.org

### Conclusion

- EMS transport has serious hazards and safety issues
- Major advances in EMS safety research, infrastructure and practice over the past 5 years
- Development of substantive EMS safety standards is a necessity and a reality
- Multidisciplinary safety issue that EMS cannot solve internally
- Failure to transfer knowledge from transportation and automotive safety is unacceptable and dangerous
- EMS is still way behind the state of the art in vehicle, transportation and occupational safety

EMSSafety  
FOUNDATION

© 2010 EMSSafety Foundation  
www.EMSSafetyFoundation.org

### And....

- It is no longer acceptable for EMS to be functioning outside of transportation, automotive and PPE safety standards for prevention of and protection of EMS providers and the public from injury and death
